

GIPSA Publishes New Moisture Meter Charts

WASHINGTON (January 1, 1998)--The USDA Grain Inspection, Packers and Stockyards Administration has revised four conversion charts for the Motomco Model 919 Moisture Meter, the approved instrument for official grain moisture testing.

Effective January 1, 1998, the new charts for Long Grain Milled rice (Chart MR-1-98), Short Grain Milled rice (Chart MR-3-98), Long Grain Milled rice (Parboiled) (Chart MR-4-98), and Second Head Milled rice (Parboiled) (Chart R-22-98) should be used for official inspections.

The revisions improve the accuracy of grain moisture measurements in the official inspection system.

Technical contact: James Rampton (816) 891-0450.
